

EXCELLENT US MARKET RESULTS FOR FENZI AT GLASSBUILD AMERICA 2015

Driven by the excellent market trend in the United States, especially with the steady increase in the use of insulating glass in residential and commercial buildings, trade people at the fair continued to be very interested in the group's products which are already well-known throughout the country. As Dave Devenish, General Manager of Fenzi North America, which is the US branch of the group, stated: "We saw many of our existing customers, and it was good to discuss all the aspects of what we have been doing together in more detail, as well as to present the characteristics of our products to prospective clients and examine opportunities for the future".

Visitors at GlassBuild America were particularly interested in the warm edge products of the Fenzi group and the Glass Alliance network, formed by Fenzi, Alu-Pro and Rolletch.

A standout was Hotver, a one-component hot-melt sealant for the production of high quality insulating glass units. This product by Fenzi can be used in both manually operated and automated production lines, has excellent physical-chemical features, is easy to process, guarantees excellent resistance to low and high temperatures, and ensures perfect adhesion.

People working in the glass industry can count on Fenzi for IG sealants, glass decorating paints and mirror backing paints that are constantly being fine-tuned to meet increasingly stricter energy requirements and to adapt to the needs of all glass processors.

As Dave Devenish stated: "Fenzi is definitely one of the few companies that can promptly supply high quality, leading-edge products, while remaining competitive".
