

Glass Alliance reports successful Mir Stekla

Published July 01, 2015 by **Greg Morris**

The Glass Alliance companies of Fenzi, Alu-Pro and Rolltech reported plenty of visitors and interest at the recent Mir Stekla event in Russia.

They said that attendance on the stand was good despite the negative economic situation in the country and a downturn in the market for flat glass, manufacturers of windows and IG units.

Fenzi and Alu-Pro General Manager, Matteo Padovan, said: "At Mir Stekla, visitors were particularly interested in our energy efficient products. The combination of Chromatech Ultra, by Alu-Pro and Rolltech, and Fenzi sealants is currently the best on the market for IG units using warm edge technology."

The energy-saving products by the Glass Alliance meet a new need in the Russian market to work with innovative products, for architectural projects requiring IG units and windows with ever-higher performance features.

"As a result of our long track record in this sector in the markets of northern Europe, where users are satisfied with the network's products, the Glass Alliance is now claimed as a reliable, solid partner that can tackle new market challenges and offer cutting-edge technology," Mr Padovan added.

The Mir Stekla exhibition took place in Russia in early June. Glass International was the exclusive media partner to the event.
