

Fenzi Features New Duralux Ultra

Posted on December 11, 2015 by News Editor

The new thermosetting Duralux Ultra mirror-backing paint by Fenzi inherits the technical features of the Duralux line but with greater protection and durability, according to the company.

Applied on silver and cross-linked in an infrared oven at medium heat, the paint forms a protective coating that is resistant to scratches, lasts longer than the company's previous line and has a shiny appearance.

Duralux Ultra is copper-free and comes in various colors.
